

CAT5 Security's Engagement Preparation

We are a penetration tester working for CAT5 Security, and we are preparing to perform an engagement for our client, Inlanefreight. The more senior team members at CAT5 want to see our skills with shells & payloads before including us in the live engagement.

The final assessment for this module is a series of challenges CAT5 Security created to test our skills. Completing the challenge means you have passed the evaluation.

Shell basics

- Replicate being able to get a bind and reverse shell.
- Bind Shell on Linux host.
- Reverse Shell on Windows Host.

Payload Basics

- Demonstrate launching a payload from MSF.
- Demonstrate searching and building a payload from PoC on ExploitDB.
- Demonstrate knowledge of payload creation.

Getting a Shell on Windows

- Using the recon results provided, craft or use a payload that will exploit the host and provide a shell back.

Getting a Shell on Linux

- Using the recon results provided, craft or use a payload to exploit the host and establish a shell session.

Landing a Web Shell

- Demonstrate knowledge of web shells and common web applications by identifying a common web application and its corresponding language.
- Using the recon results provided, deploy a payload that will provide shell access from your browser.

Spotting a Shell or Payload

- Detect the presence of a payload or interactive shell on a host by analyzing relevant information provided.

Final Challenge

- Utilize knowledge gained from the previous sections to select, craft, and deploy a payload to access the provided hosts. Once a shell has been acquired, grab the requested information to answer the challenge questions.
